Hollow Rotary Actuators

DGII Series

With Built-in AZ Series Battery-Free Absolute Sensor

The **DGII** Series integrated hollow rotary tables and stepper motor product lineup now includes models with built-in **AZ** Series products.

The battery-free absolute system positioning contributes to improved productivity and cost reduction. Presetting just once the home position and there is no need for repeatedly referencing.

Hollow Rotary Actuator Characteristics

The **DGII** Series is a line of integrated products that combines a hollow rotary table with a stepper motor. The actuator has an internal speed reduction mechanism (gear ratio 18), which makes high power driving possible.

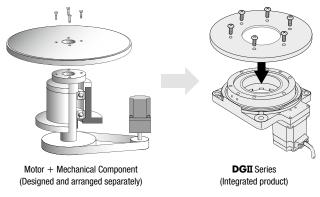

Features

A cross-roller bearing is used on the output table, which allows for both high load and high rigidity.

Simplified Design

Tables and arms can be installed directly onto the output table. This saves the hassle and cost of designing an installation mechanism, arranging necessary mechanism parts, adjusting the belt tension, etc., when mechanical components such as a belt and pulley are used for installation.

Large-Diameter, Hollow Output Table Makes Simple Wiring and Piping Possible

The large diameter hollow hole (through-hole) helps reduce the complexity of wiring and piping, thus simplifying equipment design.

Filling equipment with piped-in liquid

Product	Frame Size mm	Diameter of Hollow Section mm	
DGM85R	85	ф33	
DGM130R	130	ф62	
DGM200R	200	ф100	

High Positioning Accuracy with Non-Backlash

- Non-Backlash
- Repetitive Positioning Accuracy ±15 arc seconds (±0.004°)

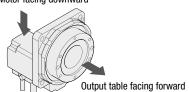

Note The repetitive positioning accuracy is measured at a constant temperature (normal temperature) under a constant load.

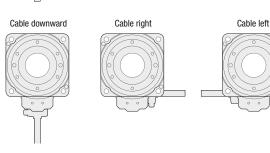

Select Cable Direction Rotated Type According to Usage

Select the motor cable direction rotated type from 3 directions according to the application.

The cable direction rotated type is defined with the output table facing forward and the motor facing downward.

Motor facing downward

	Cable	Hollow Rotary Actuator					
Power Supply	Direction	Frame Size					
	Rotated Type	85mm	130mm	200mm			
	down	•	•	•			
AC-Input	right	ı	•	•			
	left	-	•	•			
	down		•	-			
DC-Input	right	-	•	-			
	left	-	•	-			

High Load and High Rigidity

The standard type uses a cross-roller bearing on the output table bearing, which allows for both high load and high rigidity.

Maximum Permissible Axial Load 4000 N
 Maximum Permissible Moment 100 N·m

<Example Operation>

Product Name : **DGM200R-AZAC**

Power-Supply Input : 230 VAC

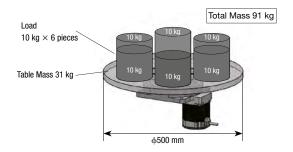

Load Mass 91 kg (6 load pieces + table)

: Load 10 kg/piece \times 6 pieces

: Table 31 kg

(Diameter 500 mm, thickness 20 mm, iron)

Overhang Distance : 160 mm Installation Direction : Horizontal

High Load

The axial load for a total mass of 91 kg is 893 N. (10 kg \times 6 pieces + 31 kg) \times g = 893 N with g equals gravitational constant in m/s²

The permissible axial load of the DGM200R is 4000 N, so this is within the permissible value.

High Load Driving is Possible

High Rigidity

[Load Moment]

When a 10 kg load is placed 160 mm from the center of the table, the moment is 15.7 N·m.

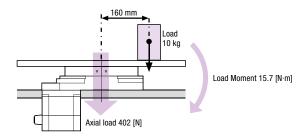

10 kg × g × 0.16 m $\stackrel{.}{=}$ 15.7 N·m with g equals gravitational constant in m/s²

The permissible moment of the **DGM200R** is 100 N·m, so this is within the permissible value.

[Axial Load]

The axial load is: table + load (31 kg + 10 kg) \times g $\stackrel{.}{=}$ 402 N with g equals gravitational constant in m/s².

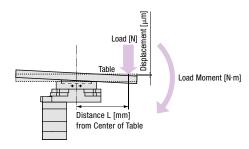

The permissible axial load of the **DGM200R** is 4000 N, so this is within the permissible value.

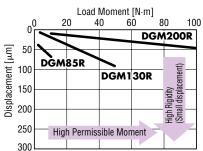

A high-rigidity rotary actuator allows a large load that is far away from the table center to be driven

 Relationship Between Load Moment and Displacement when Distance L=200 mm from Center of Table

The larger the frame size, the received permissible moment increases, but the displacement caused by the load moment decreases.

Displacement at Distance L = 200 mm from Center of Table

Simple Home Position Setting and Returnto-Home Thanks to Absolute System

The patented <ABZO Sensor>, a newly developed small mechanical multi-turn absolute sensor. Contributes to improved productivity and cost reduction.

No Home Sensor Required

Because it is an absolute system, no home sensor is required.

Reduced Cost

Sensor costs and wiring costs can be reduced, allowing for lower system costs.

Simple Wiring

Wiring is simplified, and the degree of freedom for equipment design is increased.

Not Affected by Sensor Malfunctions

No need to worry about sensor malfunctions, sensor damage or sensor disconnection.

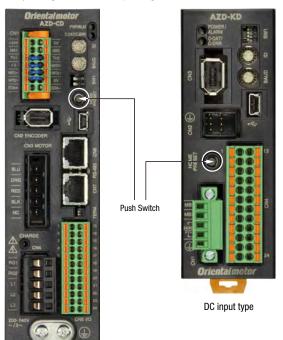

Improved Return-to-Home Accuracy

Home position accuracy is increased because the return-to-home action is performed regardless of any variations in home sensor sensitivity.

*If no limit sensor is installed, movements that exceed the limit values can be avoided through the use of the limits in the driver software.

Easy Home Position Setting

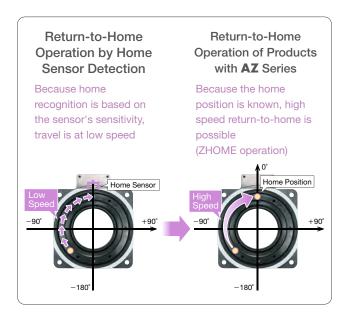

The home position can be easily set by pressing a switch on the driver's surface, which is saved by the ABZO sensor. In addition, home setting is possible with the **MEXEO2** data setting software or by using an external input signal.

AC input type

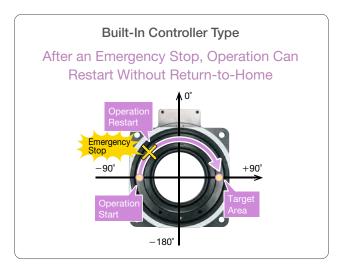

High-Speed Return-to-Home Operation

Because return-to-home is possible without using a home sensor, return-to-home can be performed at high speed without taking the specifications for sensor sensitivity into account, allowing for a shortened machine cycle.

Return-to-Home Not Required

Even if the power shuts down during a positioning operation, the positioning information is retained. Furthermore, for built-in controller types, positioning operations can restart without a return-to-home when recovering from an emergency stop of the production line or a blackout.

Battery-Free Because it is a Mechanical-Type Sensor

Battery-Free

No battery is required because it is a mechanical-type sensor. Because positioning information is managed mechanically by the ABZO sensor, the positioning information can be preserved, even if the power turns off, or if the cable between the motor and the driver is disconnected.

Reduced Maintenance

Because there's no battery that needs replacing, maintenance time and costs can be reduced.

Unlimited Driver Installation Possibilities

Because there is no need to secure space for battery replacement, there are no restrictions on the installation location of the driver, improving the flexibility and freedom of the layout design of the control box.

Safe for Overseas Shipping

Normal batteries will self-discharge, so care must be taken when the equipment requires a long shipping time, such as when being sent overseas. The ABZO sensor does not require a battery, so there is no limit to how long the positioning information is maintained. In addition, there's no need to worry about various safety regulations, which must be taken into consideration when shipping a battery overseas.

Position stored even if the cable between motor and driver is being disconnected

Positioning information is stored within the ABZO sensor.

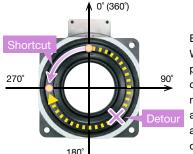

Convenient Functions Thanks to the Use of the AZ Series

Convenient Operation & Setting

By using models with **AZ** Series functions, coordinate management on the hollow rotary actuator output table can be carried out, and the follow operations are possible.

Reduce takt time with short-cut operations

This is an operation method in which the actuator rotates in the direction that is the shortest distance to the target position. This can reduce the takt time of the equipment.

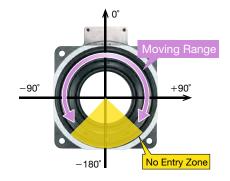

Example)

When moving from the 0° position to 270° position, counterclockwise movement is automatically selected as the shortest rotation direction.

Simple control by setting no-entry zones

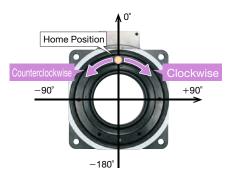

If there are obstructions on the equipment, it is possible to set a region on the output table that will be avoided.

Reduced Equipment Setup Time

The necessary operation parameters for the hollow rotary actuator are set at the time of shipment, which contributes to reduced equipment setup time.

- Home Position
- Resolution Setting (0.01°/step)
- •Output Table Rotation Direction Setting
- •Round Setting ±180°
- All initial setting values can be changed.

High Performance and High Reliability Thanks to Stepper Motor and Driver Packages *Qstep*

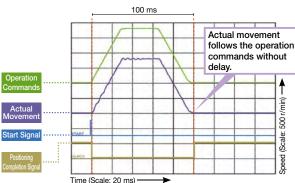

High reliability is provided by using stepper motor and driver packages that employ a control method unique to Oriental Motor, which combines the merits of both open loop control and closed loop control.

Quick Positioning through Agile Responsiveness

With stepper motors, short distance positioning is carried out in a short period of time.

Stepper motors are operated synchronously with pulse commands, and while they are compact, they still generate high torque and offer excellent acceleration performance and response.

Actual stepper motor movement in response to operation commands

<Example Operation>

Product Name : **DGM200R-AZAC**

Power-Supply Input : 230 VAC

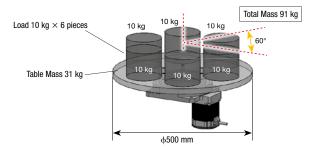

Load Mass 91 kg (6 load pieces + table)

: Load 10 kg/piece \times 6 pieces

Table 31 kg (Diameter 500 mm, thickness 20 mm, iron)

Installation Direction : Horizontal Traveling Amount : 60°

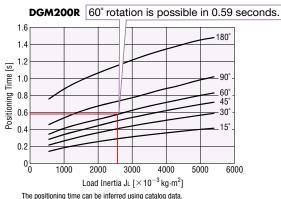

Total inertia of table and load = $2633 \times 10^{-3} \text{ kg} \cdot \text{m}^2$

Quick Positioning

With the **DGM200R**, 60° rotation of a total mass of 91 kg is possible in 0.59 seconds.

Load Inertia - Positioning Time (Reference value)

Quick positioning is possible even with large loads.

Stepper Motor and Driver Packages α

AZ Series

With built-in battery-free absolute sensor

Continues Operation Even with Sudden Load Fluctuation and Sudden Acceleration

In normal conditions, it operates synchronously with pulse commands under open loop control, and because of its compact size and high torque generation, it has excellent acceleration performance and responsiveness. In an overload condition, it switches immediately to closed loop control to correct the position.

Low Vibration Even at Low Speed

Thanks to the microstep drive system and smooth drive function* of the stepper motor, resolution can be improved without mechanical elements such as a speed reduction mechanism. As a result, speed fluctuation is minimal even at low speeds, leading to improved stability.

*About the Smooth Drive Function

The smooth drive function automatically microsteps based on the same traveling amount and traveling speed used in the full step mode, without changing the pulse input settings.

Alarm Signal Output in Case of Abnormality

If a continuous overload is applied, an alarm signal is output. Also, when the positioning is completed, a signal is output. This provides high reliability.

No Tuning Required

Because it is normally operated with open loop control, even when the load fluctuates, no tuning is needed to obtain movement exactly as set.

Maintains Stop Position Without Hunting

Thanks to the normally open loop control, there is no hunting, the minute shaft movements that occur during stopping. Because the stop location is securely maintained, it is best suited for applications that undergo vibration during stops.

Applications & Uses

Applications that Require High Rigidity Applications that Require High Performance Motors

- Applications in which a Moment Load is Applied (Ceiling mounted)
- High Positioning Accuracy Applications (Image inspection equipment)

 Applications with Load Fluctuations (Disc manufacturing equipment)

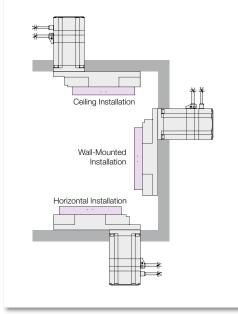

Installation Direction

In addition to horizontal installation, the DGII Series can also be ceilingmounted or wall-mounted, expanding the possibilities of equipment design.

Note

A small amount of grease will occasionally seep out of the hollow rotary actuator. If a grease leak would cause a contamination issue near the machine, either perform routine inspections, or install protective equipment such as an oil

Example Use of Simple Sequence Function (Built-in Controller Type)

The built-in controller type can simplify sequence control programming by outputting control signals to other devices, and incorporating external input signals from sensors, etc. Setting of positioning operation data (up to START 256 data settings)

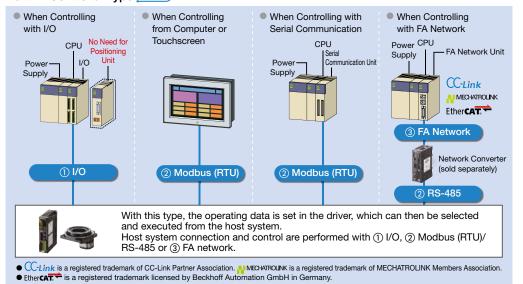

Number of general purpose inputs/outputs (9 inputs, 6 outputs) Output Positioning Operation ① Set Wait Time Input Set Conditions Positioning Operation ②

END

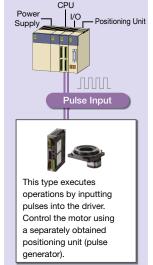

3 Driver Types Selectable to Match System Configuration

Three types of DGII Series drivers are available, depending on the master control system in use.

Built-In Controller Type FLEX

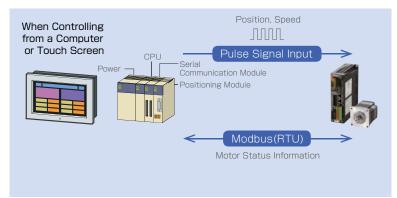

Pulse Input Type

By using a network converter (sold separately), CC-Link communication, MECHATROLINK communication or EtherCAT communication are possible. Operating data, parameter settings and operation commands can be input via various communication types. Its ability to flexibly accommodate the network being used results in a shortened design time.

Pulse-Input Type with RS-485 Communication ______

This type executes operations by inputting pulses into the driver. It controls the motor using a pulse generator. By using RS-485 communication motor status information (position, speed, torque, alarm, temperature, etc.) can be monitored.

Simple Operation with Data Setting Software (MEXE02)

Easy to use data setting software enables data setting and verification of the actual drive by using a computer.

Operating Data and Parameter Settings

Setting of operation data and parameters is easily performed via computer. Because the setting data can be saved, when the driver is replaced, the same settings can be used by transferring the saved data.

Teaching and Remote Operation

By using the data setting software and manual positioning, the operation command information can be input into the driver. Use when setting up equipment.

Various Monitoring Functions

I/O Monitoring

The state of I/O wiring to the driver can be verified by computer. This can be used for post-wiring I/O checks or I/O checks during operation.

Waveform Monitoring

The operational state of the motor (such as command speed and motor load factor), can be checked by an oscilloscope-like image. This can be used for equipment start-up and adjustment.

Alarm Monitoring
 When an abnormality occurs, the details of the abnormality and the solution can be checked.

(1) Type of Output Table Supporting Bearing

This is the type of the bearing used for the output table.

(2)Inertial Moment

This is the total sum of the rotor inertial moment of the motor and the inertial moment of the speed reduction mechanism converted to a moment on the output table.

③Minimum Traveling Amount of the Output Table This is the minimum traveling amount that can be set. (Factory setting)

4)Permissible Torque

This is the limit of mechanical strength of the speed reduction mechanism. Make sure the applied torque, including the acceleration torque and load fluctuation, does not exceed the permissible torque.

⑤Holding Torque at Motor Standstill

Power ON: This is the maximum torque with which to hold the output table in position if it stops when the power is

Electromagnetic Brake: This is the maximum torque with which to hold the output table in position using an electromagnetic brake when it stops.

6Max. Speed

This is the output table speed that the mechanical strength of the speed reduction mechanism can tolerate.

⑦Repetitive Positioning Accuracy

This is a value indicating the degree of error that generates when positioning is performed repeatedly to the same position in the same direction.

®Lost Motion

This is the difference in stopped angles achieved when the output table is positioned to the same position in the forward and reverse directions.

This is the difference between the theoretical rotation angle of the output table as calculated from the input pulse counter, and the actual rotation angle.

@Permissible Axial Load

This is the permissible value of axial load applied to the output table in the axial direction.

①Permissible Moment

When a load is applied to a position away from the center of the output table, the output table receives a tilting force. The permissible moment load refers to the permissible value of moment load calculated by multiplying the offset distance from the center by the applied load.

⁽¹²⁾Runout of Output Table Surface

This is the maximum value of runout of the installation surface of the output table when the output table is rotated under no load.

(3) Runout of Output Table Inner (Outer) Diameter

This is the maximum value of runout of the inner diameter or outer diameter of the table when the output table is rotated under no load.

(4)Parallelism of Output Table

This is the inclination of the installation surface of the output table compared with the actuator installation surface on the equipment side.

(5)Degree of Protection

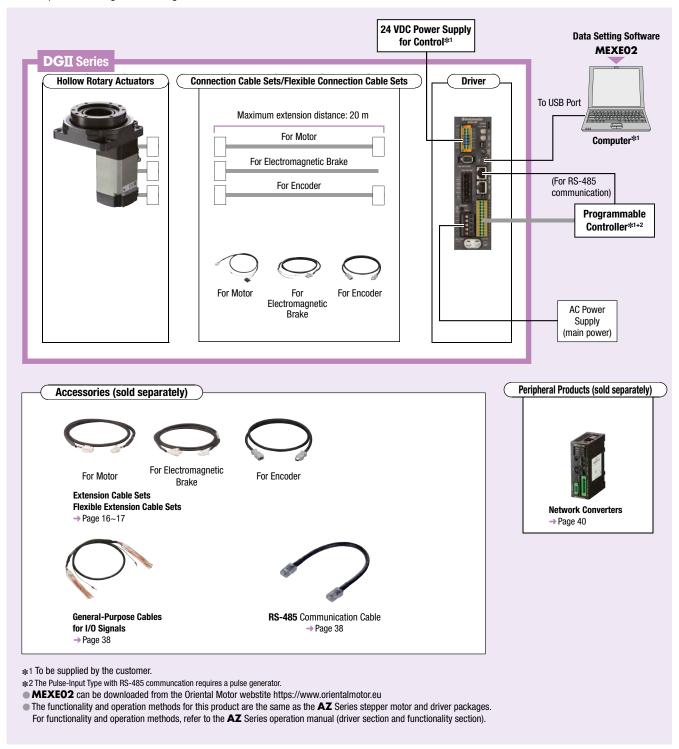

Based on IEC60529 and EN60034-5 (=IEC60034-5), dust-resistance and waterproofing regarding the degree of protection of the device is classified using a grade.

^{*1} The brackets [] indicate the specifications for the electromagnetic brake type.

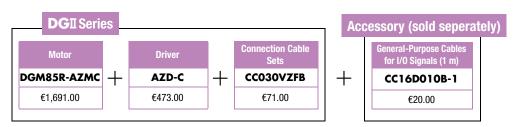

System Configuration

Combination of Electric Actuator with Electromagnetic Brake and Built-In Controller Type Driver or Pulse-Input Type **Driver with RS-485 Communication**

An example of a configuration using I/O control or RS-485 communication is shown below.

●Example of System Configuration

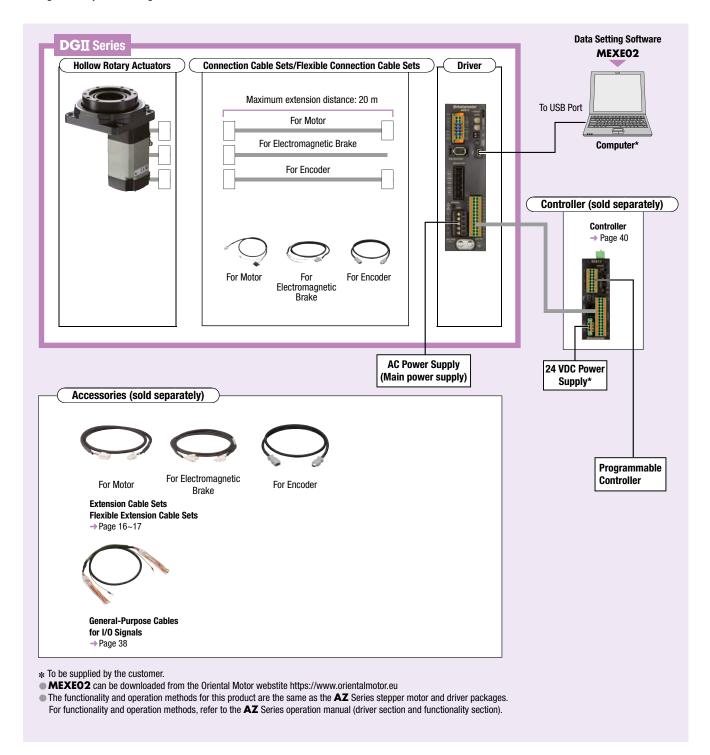

The system configuration shown above is an example. Other combinations are also available

Note

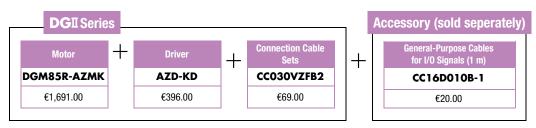

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

Combination of Electric Actuator with Electromagnetic Brake and Pulse-Input Driver

A single-axis system configuration with the **SCX11** Series controller is shown below.

●Example of System Configuration

• The system configuration shown above is an example. Other combinations are also available.
Note

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

- Either **A** (single shaft) or **M** (electromagnetic brake) indicating the configuration is entered where the box □ is located within the product name.
- Either C (single-phase 200-240 VAC) or K (24/48 VDC) indicating the power supply input is entered where the box 🔲 is located within the product name.
- lacktriangle Either lacktriangle (right) or lacktriangle (left) is entered for the cable withdrawing direction in \diamondsuit in the product name.
- \$1 The brackets [] indicate the specifications for the electromagnetic brake type.
- \$2 Changes to 24 VDC \pm 4% if the electromagnetic brake type has been extended with the 20 m accessory cable.
- *3 When operating with 48 VDC, please keep the load intertia up to 10 times the rotor inertia, and keep the torque safety factor 2 or more when calculating the acceleration torque (excluding DGM85 type) Note
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Please keep the motor case temperature at a maximum of 80°C to protect the ABZO sensor. (When conforming to the UL Standards, the temperature of the motor case must be kept at 75°C or less, since the motor is recognized as heat-resistant class A.)
- The repetitive positioning accuracy is measured at a constant temperature (normal temperature) under a constant load.

■ Built-In Controller Type RS-485 Communication Specification

Protocol	Modbus RTU Mode		
Electrical EIA-485 Based, Straight Cable Characteristics Use shielded twisted-pair cables (TIA/EIA-568B CAT5e or better recommended). The maximum total extension length is 50 m.			
Communication Mode	Half duplex and start-stop synchronization (data: 8 bits, stop bit: 1 bit or 2 bits, parity: none, even, or odd)		
Baud Rate	Rate Select from 9600 bps / 19200 bps / 38400 bps / 57600 bps / 115200 bps / 230400 bps		
Connection Type Up to 31 units can be connected to a single programmable controller (master unit).			

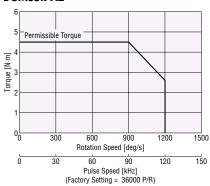

Do not perform the insulation resistance measurement or dielectric voltage withstand test while the actuator and driver are connected.

Also, do not conduct these tests on the motor ABZO sensor component.

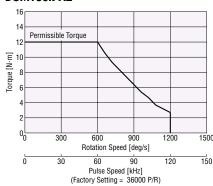

■ Speed - Torque Characteristics (Reference values)

Single-Phase 200-240 VAC

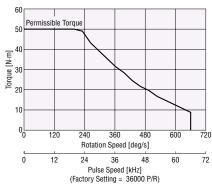

DGM85R-AZ

DGM130R-AZ

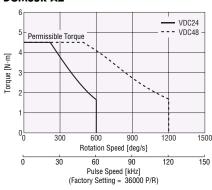

DGM200R-AZ

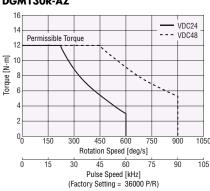

24 VDC / 48 VDC

DGM85R-AZ

DGM130R-AZ

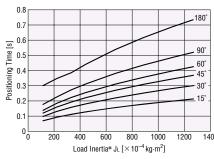

Note

- Data for the speed torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Please keep the motor case temperature at a maximum of 80°C to protect the ABZO sensor. (When conforming to the UL Standards, the temperature of the motor case must be kept at 75°C or less, since the motor is recognized as heat-resistant class A.)

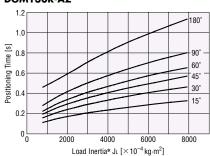

■Load Inertia – Positioning Time (Reference value)

Single-Phase 200-240 VAC

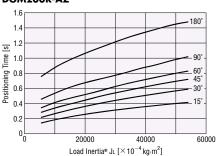

DGM85R-AZ

DGM130R-AZ

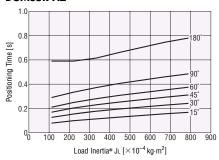

DGM200R-AZ

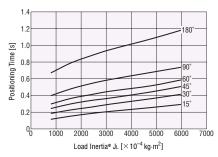

●24 VDC

DGM85R-AZ

DGM130R-AZ

 \slash The load inertia refers to the inertia of the customer's load.

Note

• The load intertia - positioning time is the theoretical value under normal temperature with a safety factor of 1.5 for torque. If the condition changes, the positioning time may change.

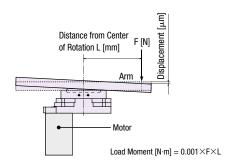

Mechanical Precision (At no load)

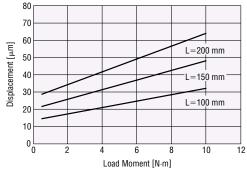

■ Displacement by Load Moment (Reference value)

The output table will be displaced when it receives a load moment. The graph plots the table displacement that occurs at distance L from the rotation center of the output table when a given load moment is applied in one direction.

The displacement becomes approximately twice the size when the load moment is applied in both the positive and negative directions.

Driver

◇Built-In Controller Type (Single-Phase 200-240 VAC)

Driver Product Name: AZD-CD, AZD-CX

Mass: 0.65 kg

Included

Main Power/Regeneration Unit Connector (CN4) Connector: 05JFAT-SAXGDK-H5.0

(J.S.T. Mfg. Co., Ltd.)

I/O Signals Connector (CN5) Connector: DFMC1, 5/12-ST-3, 5

(Phoenix Contact)

24 VDC Power Supply Input/Electromagnetic Brake Connection/ Regeneration Unit Thermal Input/Power Cutoff Signal I/O Connector (CN1)

Connector: DFMC1, 5/7-ST-3, 5-LR

(Phoenix Contact)

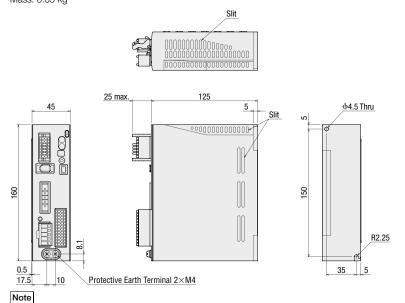

Connector Wiring Lever: J-FAT-0T

(J.S.T. Mfg. Co., Ltd.)

◇Pulse Input Type (Single-Phase 200-240 VAC)

Driver Product Name: AZD-C

Mass: 0.65 kg

Included

Main Power/Regeneration Unit Connector (CN4) Connector: 05JFAT-SAXGDK-H5.0

(J.S.T. Mfg. Co., Ltd.)

I/O Signals Connector (CN5)

Connector: DFMC1, 5/12-ST-3, 5

(Phoenix Contact)

24 VDC Power Supply Input/Electromagnetic Brake Connection/
Regeneration Unit Thermal Input/Power Cutoff Signal I/O Connector

Connector: DFMC1, 5/7-ST-3, 5-LR

(Phoenix Contact)

Connector Wiring Lever: J-FAT-0T

(J.S.T. Mfg. Co., Ltd.)

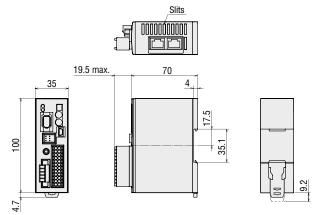

The motor cable and electromagnetic brake cable from the hollow rotary actuator cannot be connected directly to the driver. When connecting to a driver, use the accessory connection cable (sold separately) or use the included connection cable (for products which include a connection cable).

♦ Built-In Controller Type (24 VDC / 48 VDC)

♦ Pulse-Input Type with RS-485 Communication (24 VDC / 48 VDC)

Driver Product Name: AZD-KD, AZD-KX

Mass: 0.15kg

Accessories

Connector form in power/electromagnetic brake connections (CN1)

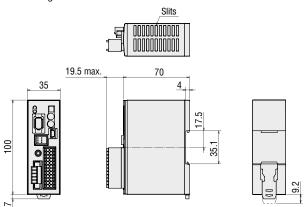

Connector: MC1,5/5-STF-3,5

(PHOENIX CONTACT GmbH & Co. KG)
Connector for Input/Output Signal (CN4)
Connector: DFMC1,5/12-ST-3,5
(PHOENIX CONTACT GmbH & Co. KG)

◇Pulse Input Type (24 VDC / 48 VDC)

Driver Product Name: AZD-K

Mass: 0.15kg

Accessories

Connector form in power/electromagnetic brake connections

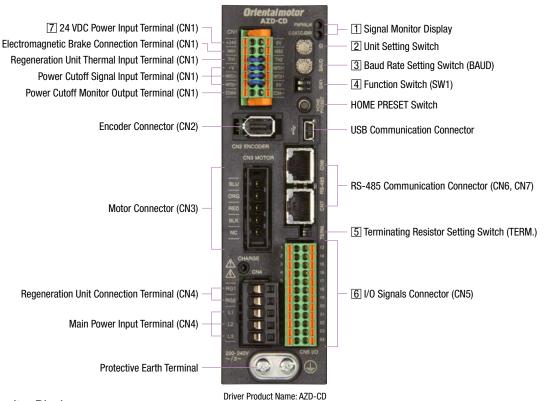

(CN1)

Connector: MC1,5/5-STF-3,5

(PHOENIX CONTACT GmbH & Co. KG)
Connector for Input/Output Signal (CN4)

Connection and Operation (Single-Phase 200-240 VAC)

- Built-In Controller Type and Pulse Input Type with RS-485 Communication
- ♦ Names and Functions of Driver Parts

1 Signal Monitor Displays

Indication	Color	Function	Lighting Condition
PWR	Green	Power supply indication	When 24 VDC power supply is input
ALM	Red	Alarm indication	When a protective function is activated (blinking)
C-DAT	Green	Communication indication	When communication data is being sent or received
C-ERR	Red	Communication error indication	When communication data is in error

2 Unit Setting Switch

Indication	Function
ID	Set this when RS-485 communication is used. Set the unit number (factory setting: 0).

3 Baud Rate Setting Switch

	<u> </u>
Indication	Function
BAUD	Set this when RS-485 communication is used. Set the baud rate (factory setting: 7).

4 Function Switch

Indication	No.	Function
SW1	1	Use in combination with the unit setting switch (ID) to set the unit number (factory setting: OFF).
SWI	2	Set the RS-485 communication protocol (factory setting: OFF).

♦ RS-485 Baud Rate Setting

No.	Baud Rate (bps)
0	9600
1	19200
2	38400
3	57600
4	115200
5	230400
6	Not used
7	Network Converters
8~F	Not used

5 Terminating Resistor Setting Switch

Indication	No.	Function
TERM.	1	Set the RS-485 communication termination resistance (120 Ω) (factory setting: OFF).
I ENIVI.	2	OFF: Terminating resistor not used, ON: Terminating resistor used

Configure both No. 1 and No. 2 to the same setting.

6 I/O Signal Connector (CN5)

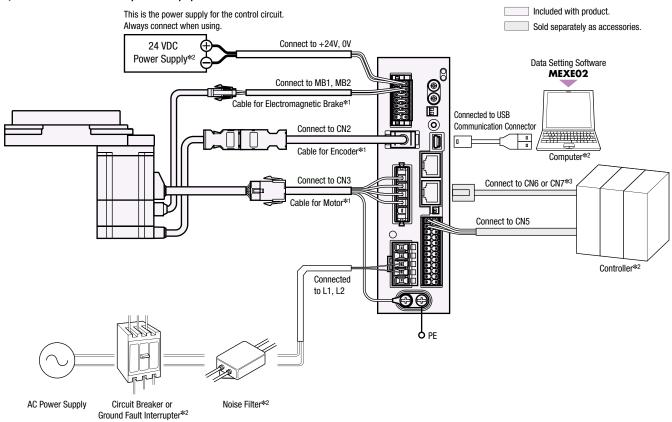

Indication	Pin No.	Signal Name	Description		
	1	INO	START	This signal is used to start positioning operation.	
	2	IN2	M1	Use 3 bits (M0, M1, M2) to select the operating data number.	
	3	IN4	ZHOME	Travels to home location set via HOME PRESET switch.	
	4	IN6	STOP	Stop the motor.	
	5	IN-COM [0-7]*1	Input common for INO~IN7		
	6	IN8	FW-J0G	Starts the JOG operation.	
	7	OUT0	HOME-END	When home is determined, output when the high speed return-to-home operation is completed.	
	8	OUT2	PLS-RDY	Not used.	
	9	OUT4	MOVE	Output when the motor is operating.	
	10	OUT-COM*1	Output Common		
	11	ASG+	A-Phase Pulse Output+		
CN5	12	BSG+	B-Phase Pulse Output+		
CNS	13	IN1	M0	Use 3 bits (M0, M1, M2) to select the operating data number.	
	14	IN3	M2	Use 3 bits (M0, M1, M2) to select the operating data number.	
	15	IN5	FREE	Switches the motor into its non-excitation state.	
	16	IN7	ALM-RST	Resets the alarm.	
	17	IN-COM [8-9]*1	IN8 and IN9 input common		
	18	IN9	RV-JOG	Starts the JOG operation.	
	19	OUT1	IN-POS	Output when motor operation is completed.	
	20	OUT3	READY	Output when the driver is ready for operation.	
	21	OUT5	ALM-B	Outputs the alarm status for the driver (normal close).	
	22	GND*1	Ground		
	23	ASG-	A-Phase Pulse Output—		
	24	BSG-	B-Phase Pulse Output—		

[•] Functions to assign can be set by specifying parameters. Initial values are shown above. For details, please refer to the AZ Series operating manual (functionality section).

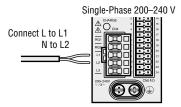

24 VDC Power Supply Input Terminal / Electromagnetic Brake Connection Terminal / Regeneration Unit Thermal Input Terminal / Power Cutoff Signal Input Terminal / Power Cutoff Monitor Output Terminal (CN1)

Indication	I/O	Terminal Name	Description	
+24 V	Innut	24 VDC Power Supply Input Terminal +	The power supply for the driver control circuit. Always connect when using.	
0 V	Input	24 VDC Power Supply Input Terminal —		
MB1	Output	Electromagnetic brake terminal —		
MB2	Output	Electromagnetic brake terminal +	Connect the electromagnetic brake cable for motors with the electromagnetic brake.	
TH1	Innut	Regeneration Unit Thermal Input Terminal	Connect the accessory (sold separately) regeneration unit (RGB100). When not connecting a regeneration unit, short these 2 terminals to each other.	
TH2	Input	Regeneration Unit Thermal Input Terminal		
HWT01+	- Input	Power Cutoff Signal Input Terminal 1+	Occasion to the state of the st	
HWT01-		Power Cutoff Signal Input Terminal 1 —	Connects to switch and host controller. If either HWTO1 input or HWTO2 input is OFF, the motor power supply is cut off directly via hardware (CPU	
HWT02+	iliput	Power Cutoff Signal Input Terminal 2+	bypassed).	
HWT02-		Power Cutoff Signal Input Terminal 2—	<i>в</i> уражжа.	
EDM+	Output	Power Cutoff Monitor Output Terminal +	Connects to host controller.	
EDM-	output	Power Cutoff Monitor Output Terminal —	If both HWT01 input HWT02 input are OFF, the EDM output turns ON.	

Connection Diagram

- *1 Products are available with a 1 m, 2 m or 3 m cable for motor and driver, and also without. If cables longer than 3 m or flexible cables are required, select the appropriate cables from the accessories (sold separately). When wiring the motor and the driver, keep a maximum distance of 20 m.
- *2 Not supplied.
- $\ensuremath{\bigstar} 3$ Connect to controller when controlling the system via RS-485 communication.

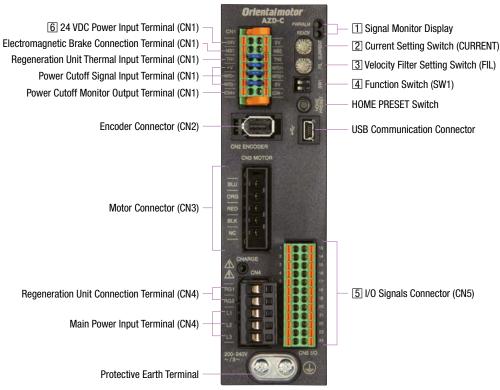

♦ USB Cable Connection

Connect to the computer on which the data setting software **MEXEO2** is installed to the driver with a USB cable. Please use USB cables which meet the follow specifications.

Specifications	USB2.0 (Full speed)			
Cable	Length: 3 m or less			
Gable	Type: A-mini-B			

Pulse Input type

♦ Names and Functions of Driver Parts

Driver Product Name: AZD-C

1 Signal Monitor Displays

Indication	Color	Function	Lighting Condition
PWR	Green	Power supply indication	When 24 VDC power supply is input
ALM	Red	Alarm indication	When a protective function is activated (blinking)
READY	Green	READY Output	When READY output is ON

2 Current Setting Switch

Indication	Function
CURRENT	Sets the basis current used by the operating current and motor standstill current (factory setting: F)

3 Command Filter Setting Switch

Indication	Function
FIL Adjusts the responsiveness of the motor (factory setting: 1).	

4 Function Switch

Indication	No.	Function		
	1	Sets the resolution per one rotation of the motor output shaft (factory setting: OFF [1000 p/r]). *		
SW1	2	Switches the pulse input mode between 1-pulse input mode and 2-pulse input mode. (Factory setting: OFF [2-pulse input Mode])		

 $[\]ensuremath{\bigstar}$ For details, please refer to the $\ensuremath{\textbf{DGII}}$ Series operating manual.

5 I/O Signal Connector (CN5)

Indication	Pin No.	Signal Name		Description
	1	CW+ [PLS+]*1	CW pulse input+ [pulse input+]	
	2	CCW+ [DIR+]*1	CCW pulse input+ [Rotation Direction Input+]	
	3	IN4	ZHOME	Travels to home location set via HOME PRESET switch.
	4	IN6	STOP	Stop the motor.
	5	IN-COM [4-7]*1	Input common for IN4~IN7	
	6	IN8	FW-J0G	Starts the JOG operation.
	7	OUT0	HOME-END	When home is determined, output when the high speed return-to-home operation is completed.
	8	OUT2	PLS-RDY	Output when pulse input preparation is completed.
	9	OUT4	MOVE	Output when the motor is operating.
	10	OUT-COM*1	Output Common	
	11	ASG+	A-Phase Pulse Output+	
CN5	12	BSG+	B-Phase Pulse Output+	
	13	CW- [PLS-]*1	CW pulse input— [pulse input—]	
	14	CCW- [DIR-]*1	CCW pulse input— [Rotation Direction Input—]	
	15	IN5	FREE	Switches the motor into its non-excitation state.
	16	IN7	ALM-RST	Resets the alarm.
	17	IN-COM [8-9]*1	IN8 and IN9 input common	
	18	IN9	RV-JOG	Starts the JOG operation.
	19	OUT1	IN-POS	Output when motor operation is completed.
	20	OUT3	READY	Output when the driver is ready for operation.
	21	OUT5	ALM-B	Outputs the alarm status for the driver (normal close).
	22	GND*1	Ground	
	23	ASG-	A-Phase Pulse Output—	
	24	BSG-	B-Phase Pulse Output—

Connection Diagram

○Connections with Peripheral Equipment

- **★1** Products are available with a 1 m, 2 m or 3 m cable for motor and driver, and also without.
 - If cables longer than 3 m or flexible cables are required, select the appropriate cables from the accessories (sold separately).
- When wiring the motor and the driver, keep a maximum distance of 20 m.
- *2 Not supplied.

♦ Connecting the Main Power Supply

♦ USB Cable Connection

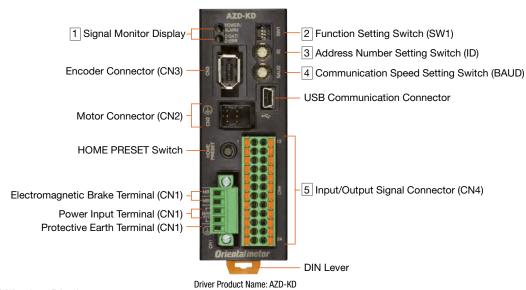

Connect to the computer on which the data setting software **MEXEO2** is installed to the driver with a USB cable. Please use USB cables which meet the follow specifications.

Specifications	USB2.0 (Full speed)
Cable	Length: 3 m or less
Cable	Type: A-mini-B

Connection and Operation (24 VDC / 48 VDC)

- Built-In Controller Type and Pulse Input Type with RS-485 Communication
- ♦ Name and Functions of Driver Parts

1 Signal Monitor Display

♦LED Display

Display	Colour	Function	When Activated
POWER	Green	Power Display	When power is on.
ALARM	Red	Alarm Display	Blinks when protective functions are activated.
C-DAT	Green	Communication Display	When communication data is received or sent.
C-ERR	Red	Communication Error Display	When there is an error with communication data.

2 Function Setting Switch

Display	No.	Function		
	1	This sets the address number in combination with the address number setting switch (ID) (Factory Setting: OFF).		
	2	This sets the protocol for RS-485 communication (Factory Setting: OFF).		
SW1	3	Set the RS-485 communication terminal resistor (120 Ω) (Factory Setting: OFF).		
	4	OFF: no terminal resistor, ON: terminal resistor connected.		

*Please use the same settings for both No. 3 and No. 4.

3 Address Number Setting Switch (ID)

Display	Function
ID	Set the address number for RS-485 communication (Factory Setting: 0).

4 Communication Speed Setting Switch

Display	Function
BAUD	Set this when using RS-485 communications. Set the communication speed (Factory Setting: 7).

\diamondsuit Settings of the RS-485 Communication Speed

No.	Baud Rate (bps)
0	9600
1	19200
2	38400
3	57600
4	115200
5	230400
6	Not used
7	Network Converter
8–F	Not used

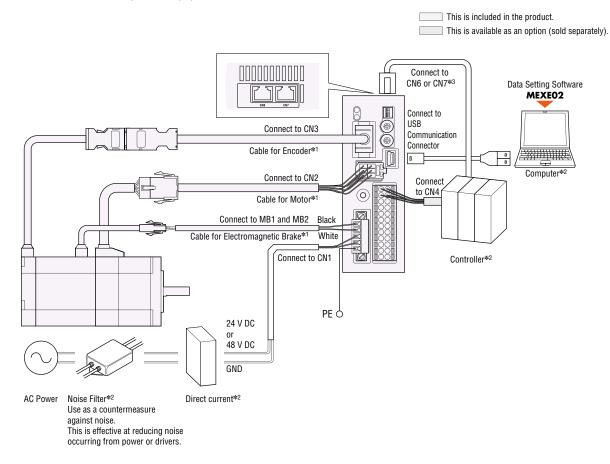

5 Input/Output Signal Connector (CN4)

Display	Pin Number	Signal Name	Content			
	1	IN0	START	This signal is used to start positioning operation.		
	2	IN2	M1	Use the 3 bits of M0, M1, M2, to select the drive data No.		
	3	IN4	ZHOME	Move to the home position set with the HOME PRESET switch.		
	4	IN6	STOP	Stop the motor.		
	5	IN-COM [0-7]*1	INO~IN7 input common			
	6	IN8	FW-JOG	Start JOG operation.		
	7	OUT0	HOME-END	Output when determining the home position or completing high speed point of return-to-home operation.		
	8	OUT2	PLS-RDY	Not used		
	9	OUT4	MOVE	Output while operating the motor.		
	10	OUT-COM*1	Output common			
	11	ASG+	A phase pulse output+			
CN4	12	BSG+	B phase pulse output+			
UNA	13	IN1	M0	Use the 3 bits of M0, M1, M2, to select the drive data No.		
	14	IN3	M2	Use the 3 bits of M0, M1, M2, to select the drive data No.		
	15	IN5	FREE	The motor is set to non-excitation.		
	16	IN7	ALM-RST	Reset the alarm.		
	17	IN-COM [8-9]*1	IN8, IN9 input common			
	18	IN9	RV-JOG	Start JOG operation.		
	19	OUT1	IN-POS	Output when the motor operation is complete.		
	20	OUT3	READY	Output when the driver is ready for operation.		
	21	OUT5	ALM-B	Output the driver alarm state (normal close).		
	22	GND*1	Ground			
	23	ASG-	A phase pulse output-			
	24	BSG-	B phase pulse output-			

[•] Assigned functions are set by means of the parameter settings. The above is the initial value. For details, refer to the User's Manual.

^{*1} The initial value setting cannot be changed.

Connection Diagram

- \$1 Products with cable for connecting between motor and driver (1 m, 2 m, 3 m) are available as well as those to which such cable is not attached. Cables longer than 3 m or flexible cables can be selected as an option (sold separately).
- Make sure a cabling distance between the motor and the driver is 20 m or less.
- *2 Prepared by the customer.
- $\bigstar 3$ When controlling with RS-485 communications, connect to the controller.

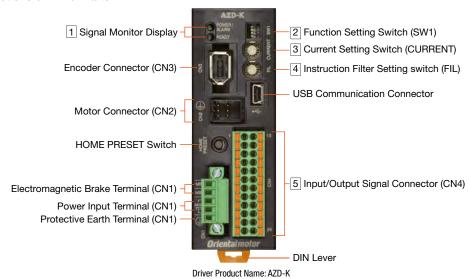

♦ USB Cable Connection

The computer on which the data setting software **MEXEO2** is installed and driver are connected with a USB cable. Use the following specifications for the USB cable.

Specification	USB2.0 (full speed)	
Cable	Length: 3 m (or less)	
Gable	Format: A-mini-B	

Pulse Input type

♦ Names and Functions of Driver Parts

1 Signal Monitor Display

Display	Colour	Function	When Activated
POWER	Green	Power Display	When power is on.
ALARM	Red	Alarm Display	Blinks when protective functions are activated.
READY	Green	READY output	When READY output is set to ON

2 Function Setting Switch

Display No. Function		Function
1 Set the resolution for e		Set the resolution for each motor output axis rotation (Factory Setting : OFF [1000p/r]).
SW1	2	Set the pulse input format to 1 pulse input mode or 2 pulse input mode. (Factory Setting: OFF [2 pulse input mode])
	3, 4	Not used

3 Current Setting Switch

Display	Function
CURRENT	Set basic current that is the base for the operation current and stop current (Factory Setting: F).

4 Command Filter Setting Switch

Display	Function
FIL	Adjust the responsiveness of the motor (Factory Setting: 1).

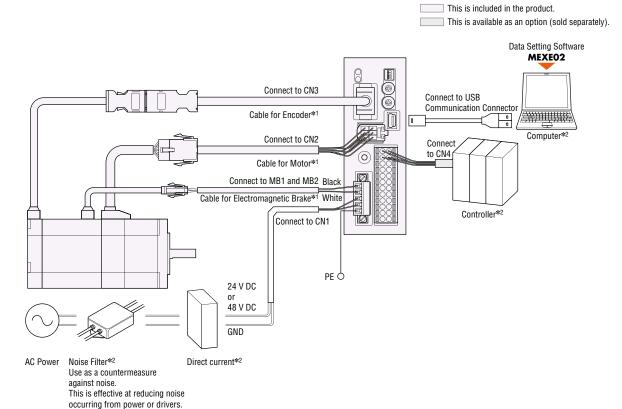

5 Input/Output Signal Connector (CN4)

Display	Pin Number	Signal Name	Content		
	1	CW+[PLS+]*1	CW pulse input+[pulse input+]		
	2	CCW+[DIR+]*1	CCW pulse input+[rotation direction input+]		
	3	IN4	ZHOME	Move to the home position set with the HOME PRESET switch.	
	4	IN6	STOP	Stop the motor.	
	5	IN-COM [4-7]*1	IN4-IN7 input common		
	6	IN8	FW-JOG	Start JOG operation.	
	7	OUT0	HOME-END	Output when determining the home position or completing high speed home position return operation.	
	8	OUT2	PLS-RDY	Output when the pulse input preparation is complete.	
	9	OUT4	MOVE	Output while operating the motor.	
	10	OUT-COM*1	Output common		
	11	ASG+	A phase pulse output+		
CN4	12	BSG+	B phase pulse output+		
	13	CW-[PLS-]*1	CW pulse input-[pulse input-]		
	14	CCW-[DIR-]*1	CCW pulse input—[rotation direction input—]		
	15	IN5	FREE	The motor is set to non-excitation.	
	16	IN7	ALM-RST	Reset the alarm.	
	17	IN-COM [8–9]*1	IN8, IN9 input common		
	18	IN9	RV-JOG	Start JOG operation.	
	19	OUT1	IN-POS	Output when the motor operation is complete.	
	20	OUT3	READY	Outputs when the driver is ready for operation.	
	21	OUT5	ALM-B	Output the driver alarm state (normal close).	
	22	GND*1	Ground		
	23	ASG-	A phase pulse output—		
	24	BSG-	B phase pulse output—		

Assigned functions are set by means of the parameter settings. The above is the initial value. For details, refer to the User's Manual.

^{*1} The initial value setting cannot be changed.

Connection Diagram

*1 Products with cable for connecting between motor and driver (1 m, 2 m, 3 m) are available as well as those to which such cable is not attached. Cables longer than 3 m or flexible cables can be selected as an option (sold separately).

Make sure a cabling distance between the motor and the driver is 20 m or less.

 $\divideontimes 2$ Prepared by the customer.

♦ USB Cable Connection

The computer on which the data setting software **MEXEO2** is installed and driver are connected with a USB cable. Use the following specifications for the USB cable.

	Specification	USB2.0 (full speed)
	Cable	Length: 3 m (or less)
	Gable	Format: A-mini-B

Accessories (sold separately)

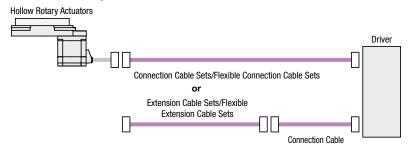

Connection Cable Sets, Flexible Connection Cable Sets Extension Cable Sets, Flexible Extension Cable Sets

If the distance between the motor and driver is extended to 3 m or longer, a connection cable set or extension cable set must be used. The maximum length of the cable extension is 20 m (using included connection cable).

For the single shaft motors, cables come as a set of motor and encoder cables. For the electromagnetic brake type motor, cables come as a set of motor, encoder and electromagnetic brake cables.

Use a flexible connection cable set or flexible extension cable set if the cable will be bent repeatedly.

Connection Example:

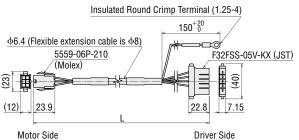

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use the accessory connection cable (sold separately) or use the included connection cable (for types which include a connection cable).

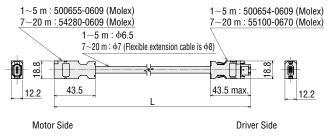

Dimensions (Unit: mm)

Connection Cable

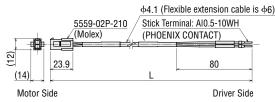

Note

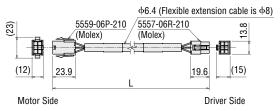

\Diamond Cable for Encoder

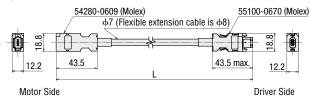

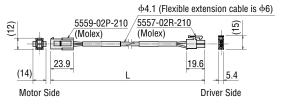

○Cable for Electromagnetic Brake

Extension Cable

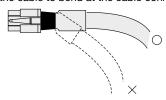

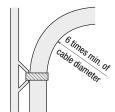

Notes on Use of Flexible Cable

(1)Do not allow the cable to bend at the cable connector.

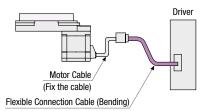

②Bending radius should be at least 6 times the cable diameter.

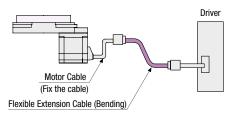

3The actuator cable and supplied connection cable is not flexible. If your application requires flexibility a flexible cable will be required.

• Flexible Connection Cable

• Flexible Extension Cable

General-Purpose Cables for I/O Signals

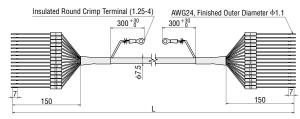

■Product Line

Product Name	Length L [m]	List Price
CC16D005B-1	0.5	€18.00
CC16D010B-1	1.0	€20.00
CC16D015B-1	1.5	€23.00
CC16D020B-1	2.0	€25.00

● The products above are 16 core. 6, 10 and 12 core types are also available.

Dimensions (Unit: mm)

RS-485 Communication Cable

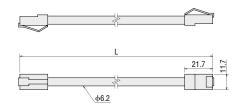

This cable is used to link drivers in multi-axis operations with the built-in controller type.

It also connects the network converter to the driver.

■Product Line

Product Name	Length L [m]	List Price
CC001-RS4	0.1	€26.00
CC002-R54	0.25	€31.00

Dimensions (Unit: mm)

Home Sensor Sets

A home sensor set, which consists of a photomicro sensor, cable type connector, sensor mounting bracket, shield plate and installation screws, is provided.

Product Line

Product Name	Sensor Type	Applicable	List Price
PADG-SB	NPN (for sourcing Input)	DGM85R-AZ DGM130R-AZ	€96.00
PADG-SBY	PNP (for sinking Input)	DGM130R-AZ	€77.00

PNP type

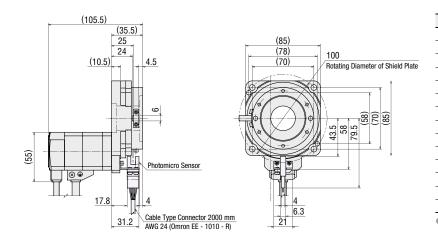

Product	DGM85, DGM130, DGM200: EE-SX673R (manufactured by Omron)	
Power Supply	5~24 VDC±10%, ripple (P-P) 10% or less	
Current Consumption	30mA or less	
Control Output	PNP open-collector output, 5~24 VDC, 50 mA or less Residual voltage 1.3 VDC or less (at load current of 50 mA)	
Indicator LED	Detection display (red)	
Sensor Logic	Normally open/normally closed (selectable, depending on connection)	

NPN type

Product	DGM85, DGM130, DGM200: EE-SX 673 A (manufactured by Omron)	
Power Supply	5~24 VDC±10%, ripple (P-P) 10% or less	
Current Consumption	35 mA or less	
Control Output	NPN open-collector output, 5~24 VDC, 100 mA or less Residual voltage 0.8 VDC or less (at load current of 100 mA)	
Indicator LED	Detection indicator (red)	
Sensor Logic	Normally open/normally closed (selectable, depending on connection)

[■] Either C (AC power supply input) or K (DC power supply input) is entered in the box ☐ within the product name.

Regeneration Unit

During vertical drive (gravitational operation) or sudden start/stop in high inertia, an external force causes the motor to rotate and function as a power generator. When the regenerative power exceeds the driver's regenerative power absorption capacity, it may cause damage to the motor.

In such a case, the regeneration unit is connected to the driver to convert regenerative energy into thermal energy for dissipation.

Product Line

Product Name	List Price
RGB100	€45.00

Specifications

Item	Description
Continuous Regenerative Power	50 W
Resistance Value	150 Ω
Thermostat Operating Temperature	Open: 150±7°C Close: 145±12°C (Normally closed)
Thermostat Electrical Rating	120 VAC 4 A 30 VDC 4 A (Min. current 5 mA)

[•] Attach the regeneration unit to a location that has the same heat radiation capability as an aluminum heat radiation plate that is 350×350 mm and 3 mm thick.

Network-Compatible Products (sold separately)

Network Converters

Network converters convert host communication protocol to Oriental Motor's original RS-485 communication protocol. You can use a network converter to control Oriental Motor's RS-485compatible products within the host communication environment.

Product Line

Network Type	Product Name	List Price
CC-Link Ver.1.1-Compatible	NETC01-CC	€215.00
